[摘要] 三七原人参三醇型总皂苷用琼斯试剂氧化, “一锅法”得到一个三降达玛烷三萜。

[关键词] 原人参三醇型总皂苷; 一锅法; 三降达玛烷型三萜

中图分类号: Q946 文献标志码: A 文章编号: 1000-2723(2011)06-0018-03

丰产易得天然产物结构改造可以高效率地制备衍生物库供活性筛选^[1]。三七位居云南名药之首, 资源丰富, 活性成分皂苷含量高^[2], 药农愿栽, 制药企业积极生产, 但三七的研发以皂苷提取分离为主, 对皂苷元的结构改造研究与开发很有限, 且主要集中在C₃₀型碳骨架的达玛烷三萜上^[3,4]。三七皂苷抗肿瘤活性有皂元>单糖皂>双糖皂>三糖皂>四糖皂的特点^[5], 故研究三七皂苷元结构改造具有重要意义。

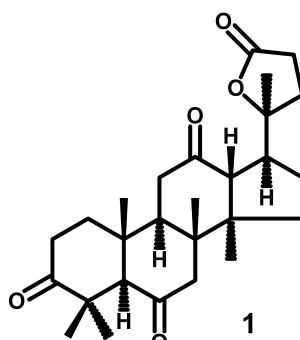

图1 产物化合物1

三七皂苷元的结构修饰一般采用皂苷水解后分离皂元再衍生化的方法, 操作比较复杂, 且只得到C₃₀型皂元衍生物。我们用原人参二醇型总皂苷为原料“一锅法”制备了C₂₇型和C₂₄型皂元衍生物^[6]。本文报道对三七原人参三醇型总皂苷直接

用琼斯氧化, 即将水解反应与氧化反应合并为“一锅”, 简明得到一个三降达玛烷型三萜(C₂₇型)衍生物。

1 实验部分

1.1 试剂与仪器

三氧化铬(AR); 硫酸(AR); 丙酮(AR); 氯仿(AR); 石油醚(AR); 乙酸乙酯(AR); 层析硅胶(青岛海洋化工厂); 高效硅胶G板(青岛海洋化工厂); 显色剂(V(硫酸):V(乙醇)=100:5); 原人参三醇型总皂苷购自云南昆明圣火制药厂。

瑞士AM-400型核磁共振波谱仪(中国科学院昆明植物研究所仪器测定中心)。

1.2 Jones试剂的制备

称取三氧化铬固体26.72g, 加入适量蒸馏水使其溶解, 再分批加入23mL浓硫酸, 并不断搅拌, 最后加入适量水稀释至100mL。

1.3 原人参三醇型总皂苷的琼斯氧化

取原人参三醇型总皂苷6g, 加入约50mL水和约50mL的丙酮充分溶解, 再加入56mL琼斯试剂, 置室温下搅拌反应1h后, 加入0.5倍液体体积的水后, 用氯仿萃取3次, 合并回收得3.5g反应物。反应物经硅胶H柱层析分离, 用石油醚:乙酸乙酯(2:3)洗脱, 经浓缩、重结晶得到化合物1, 无色结晶, 重480mg(见图1)。

1.4 光谱数据

1 C₂₇H₃₈O₅ 为无色结晶。[α]_D²¹ = +52.5 (c = 7.65mg/mL, CD₃Cl);

MS: 442⁺, 442 (30), 385 (12), 343 (17), 181 (38), 163 (20), 124 (25), 109 (27), 99 (100);

IR (KBr): ν_{max} 3435, 2980, 1771, 1706, 1455, 1385, 1257, 1209, 1163, 1088, 916, 621cm⁻¹;

¹³C-NMR (400MHz, CD₃OD), δ: 40.5 (t, C-1); 33.5 (t, C-2); 209.3 (s, C-3); 55.2 (s, C-4); 64.6 (s, C-5); 208.6 (s, C-6); 42.7 (s, C-7); 45.9 (s, C-8); 39.5 (d, C-9); 42.7 (s, C-10); 51.6 (t, C-11); 213.4 (s, C-12); 56.3 (s, C-13); 46.9 (s, C-14); 32.2 (t, C-15); 24.0 (d, C-16); 53.3 (d, C-17); 16.6 (q, C-18); 15.9 (q, C-19); 88.2 (s, C-20); 21.5 (q, C-21); 31.5 (t, C-22); 28.8 (t, C-23); 176.7 (s, C-24); 24.0 (q, C-25); 25.0 (q, C-26); 16.3 (q, C-27)。

2 结果与讨论

谱图分析: 红外光谱表明, 3 000cm⁻¹以上无峰, 说明不含双键。1 771cm⁻¹, 1 706cm⁻¹, 为两个羰基峰。质谱 (EIMS) 给出分子量为 442。¹³C-DEPT 谱显示共有 27 个碳, 包括 6 个 CH₃, 8 个 CH₂, 4 个 CH, 8 个季碳, 累计为 C₂₇H₃₈。其中还有 4 个羰基信号, 其中 176.7 单峰应该为新生成的季碳上的羰基。

化合物的生成机理为:

6、20 位糖链在反应条件下脱去, 6 位羟基与 3、12 位羟基被氧化成酮; 24、25 位双键先被氧化成邻二羟基, 再继续氧化断链脱去 25、26、27 三个碳原子 (碳架因而改变), 24 位碳氧化成羧酸, 与 20 位羟基脱水生成 γ-内酯 (见图 2)。

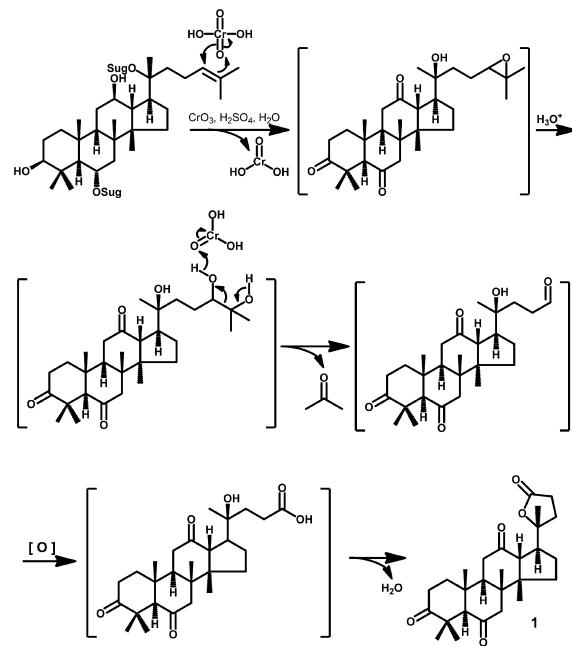

图 2 生成机理

由于该化合物简明易得, 除值得研究其本身的生物活性外, 更可以方便地用作进一步结构改造的原料, 新碳架的生成意味着可以制备大量新衍生物供活性研究。

The Research about Relevance between Psychological Adjustment Methods with Modern Psycho-therapy of Dissemination – southern Buddhism of Dai Ethnic Minority

QIN Zhu, MA Ding-song

(Yunnan University of TCM, Kunming Yunnan 650500, China)

[ABSTRACT] Thousands of years, the Dai people hold the unique way consciously or unconsciously to carry through their psychological adjustment, which maintains the national mental health and social stability. This paper will analyze and research the dissemination – southern Buddhism of Dai ethnic minority, to find a reasonable meaning with the psychological adjustment of its functions and to the modern interpretation of its relevance, to complement and improve the academic content of minority psychology in Yunnan province, and establish the basis for promoting the compatible and complementary of Han and minority psychological adjustment methods.

[ABSTRACT] *Trollius yunnanensis* (Franch.) Ulbr, it is an unaltered wild species in high altitudes, its flower has beautiful in design and golden, and it has important value of medicine, economy and ecology. The population distribution of the plant have wreaked dreadful have among the wildlife by excessive collecting, the most immediate problem is to cultivate the plant. This experiment cultivated *Trollius yunnanensis* from Li-jian to Kun-ming and the author chose the data of the annual mean precipitation by the hydrometric station of this county and the meteorological stations nearby 2009 and the longitude, latitude and altitude of each station as the study objects, The experimental results indicate that *Trollius yunnanensis* introduction and cultivation is a feasible way.
